

O&M

OPERATIONS AND MAINTENANCE SERVICES

OUR SERVICE OFFERING

EvoEnergy are the trusted renewable energy Operations and Maintenance (O&M) partner for many businesses in the UK.

Our team provide both proactive and reactive maintenance for commercial electrical technologies including; Solar, Battery, EV Chargers & HV/LV.

Our services give you peace of mind for the lifetime of your system ensuring that it operates safely and efficiently, achieving optimal performance, enabling the realisation of your environmental and financial goals.

At EvoEnergy:

- We are a recognised market leader in commercial energy technologies.
- We are a friendly and highly qualified team.
- With engineers located around the country we can provide a rapid service to the whole of the UK.
- Customer satisfaction is our priority.
- All systems can be part of the same assurances/compliance by taking our regular safety inspection.
- Even if your systems were not installed by EvoEnergy, you can find confidence in us as your new partner.

The team at EvoEnergy have developed a comprehensive O&M service suite. From this service suite, you can select your own bespoke tailored package to suit your business needs.

Maintenance Inspections.

Typically a once a year planned visit to assess that the components are working safely and efficiently to support the optimum performance of your renewable investment and as part of your annual electrical compliance.

Maintenance Repairs

Reactive or scheduled visits to repair or replace components that are not working safely or efficiently will aid the optimum performance of your renewable investment.

Performance Monitoring

Our expert team actively monitor your system and benchmark against our portfolio of local installations to support the optimum performance and return on investment of your renewable investment. We can give you access to see real time visibility of your system performance for both internal and external promotion.

Operational Call Incident Facility

An expert in your time of need.

Operational Performance Reporting

We provide your monthly performance reporting

Operational Warranty Claims

We manage your warranty claims on failed components.

Cleaning

Although most renewable energy systems require little cleaning, dirt can accumulate and reduce performance therefore it is important to consider regular cleaning.

Design and Integration of a future proof Energy Centre for new Renewable Technology

As your renewables partner, we offer our expertise to help further your renewable capabilities to reduce your reliance on the grid.

SOLAR MAINTENANCE & MONITORING

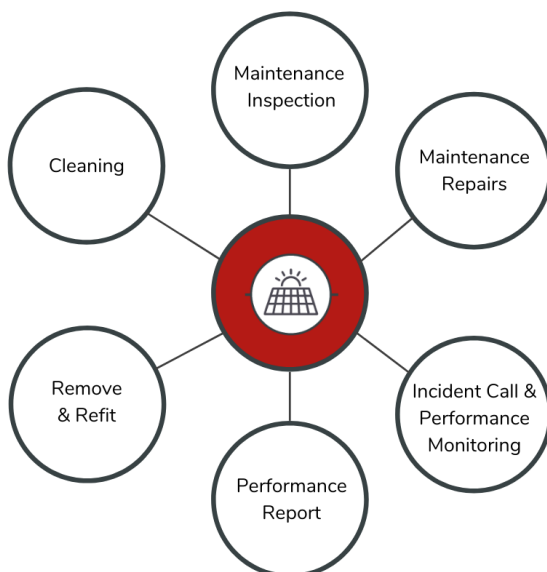

Our preventative solar panel maintenance plan is designed to maximise your solar PV investment return, and to help with your risk management as part of your annual electrical compliance regime.

We recommend annual solar panel maintenance for all commercial PV systems in addition to daily monitoring.

Sophisticated solar panel monitoring can identify potential generation issues allowing immediate attention before they become bigger, more expensive problems.

Benefits of Regular Maintenance Visits

Solar PV systems are subject to sustained high working loads during peak months. This can place components under considerable stress, it is important that the condition of components are regularly checked to capture early signs of deterioration and premature wear and tear. This can prevent more significant problems later, reducing the possibility of complete breakdown, therefore minimising downtime and maximising yield

EvoEnergy bespoke Monitoring Service

Live generation monitoring through our own custom made platform.

Our platform can collect enhanced level live performance data from various manufacturer's systems providing inverter level detailed insight.

Our expert technicians actively monitor your system 24/7 and benchmark against local arrays in our portfolio.

Repairs

As a large commercial installer, we have built strong relationships with many major manufacturers and suppliers of inverters and associated equipment. These relationships enable us to respond effectively to repair requests nationwide.

We can attend to faults and breakdowns from a simple inverter exchange, minor rewiring or data issue, up to the additional services below.

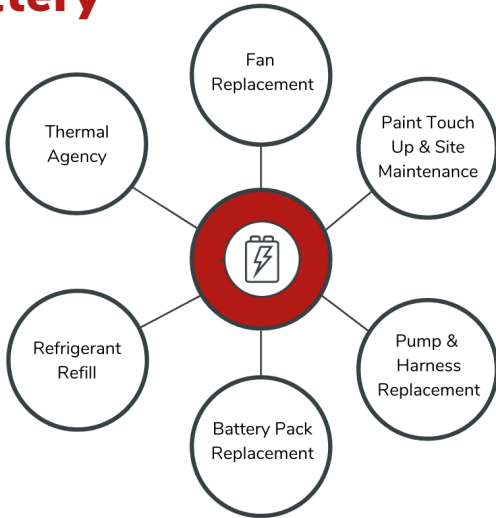

Additional Services:

- Our expert teams can provide a lift and shift to another building or remove and refit for roof repairs.
- Consultancy to identify and address poor performing systems.
- Consultancy on fire protection design and installation.
- Accompany the FIT provider's inspector for meter and reading verification.
- Consultancy to enforce your PV system owner rights under EPC or O&M contracts, both Financial and Operational.

“Maintenance & monitoring minimises generation downtime, maximising return on investment “

OTHER TECHNOLOGIES

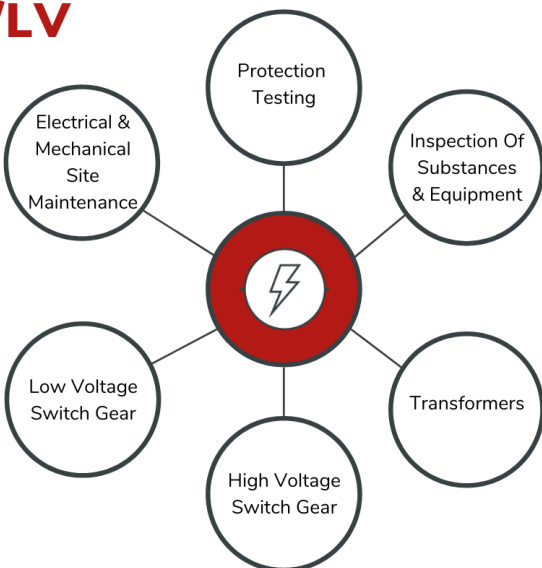

Battery

EV charging systems have low maintenance requirements, however can be hazardous and potentially lethal, and therefore important to be maintained by a qualified and competent person.

EvoEnergy's maintenance include a check of system components for condition and function. Taking out the O&M package supports systems to have maximum lifespan.

HV/LV

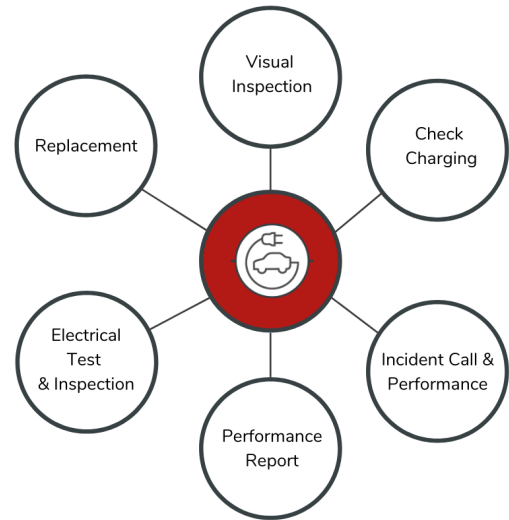

Our preventative solar panel maintenance plan is designed to maximise your solar PV investment return, and to help with your risk management as part of your annual electrical compliance regime.

We recommend annual solar panel maintenance for all commercial PV systems in addition to daily monitoring.

Sophisticated solar panel monitoring can identify potential generation issues allowing immediate attention before they become bigger, more expensive problems.

EV Chargers

Should a power failure occur, it could be expensive and cause major disruption to your business. Our engineers will regularly inspect that your network is mechanically sound and mitigate potential issues before it is too late.

We can carry out visual or full electrical test and inspection of HV/LV installations and provide routine maintenance of all mechanical / electrical elements including oil filled transformers and switchgear.
